The Muon Drift Tube Test for ATLAS Muon Detector Upgrade

Sunday, January 22, 2023 8:42 AM (12 minutes)

The presentation focuses on the purpose of the muon detector upgrade for ATLAS at CERN, and then further dives into the mechanics of the spectrometers themselves. I then follow up with my contributions to the building of these spectrometers, which involves quality control testing before parts are moved into final construction.

Presenter: REAM, Katie (University of Michigan)

Session Classification: Student Research Talks II
